

The new TFT module ETML101000DH6 with a resolution of 1024*(RGB)*600 is an EDT made module and equipped with an EDT designed high performance backlight.

The CTP comes with an integrated cover lens. The idea is, that you get a cover lens made, designed according to your own size, shape and layout. The TFT is also available without touch.

Actually we have samples on our own stock. Please contact us, if you need some pieces to test it for your new projects or to receive the specification:
