

Best experience in Display Sales with the technical background from passive LCD up to the newest industry TFT technology.

In co-operation with our Key Supplier we can initialize and influence their product portfolio. EDT Corp. has a leading position for these industrial TFT products.

For this reason we have launched the development of our new TFT family with a Unified Interface Structure. With a single Hardware concept you can choose from a variety of TFT's in different sizes and resolutions while the interface, cable and connector keeps the same.

Of course these TFT's can have optional touch panels on board either resistive as well as projected capacitive touch panels (CTP).

Do not hesitate and have a lead over your competitors.

We are looking forward to your interesting RFQ.
