

Unique Diamonds in Displays

... cool wide format

A special TFT format - combined with a graphic controller SSD1963 - can offer a fast way to realize a unique design.

Our partner Raystar released this TFT either as a complete module or as a base for semi-custom module.

The TN-TFT glass is assembled with o-film having the advantage of wide viewing angle 75 | 75 | 75 | 75 and a typical contrast of 500:1.

Of course this TFT is optional available with CTP.
